

SOME WAYS OF TEACHING ENGLISH TO CHILDREN

Razzakova Shakhlo, Abdinazarov Baxtiyor
Samarkand State Institute of Foreign Languages

Abstract. This article covers some effective ways and tested methods used in learning and teaching English language to children.

Key words: language, English language, independent language learning, interest, activity, vital methods.

Introduction. Today, the demand and interest in learning foreign languages, especially English, has increased so much that children from kindergarten to senior professionals are trying to learn English. This is definitely a positive situation, because learning a language opens doors for personal interests along with learning the culture, history and customs of the countries that speak that language. I have been attending English classes for several years, and the most frequently asked question by students during this period is “When will I speak English?” Answering this question requires attention to many aspects. I think that the information that I will give below can help young people.

Popular methods of teaching and learning English and Internet resources were used in the research process. During the writing of the article, theoretical-deductive conclusions, analysis and synthesis, principles of logic were used.

1. Do not use Uzbek words.

The method of continuous communicative teaching sounds great and the effect is no less. The more the child is spoken to only in English, the faster the language is acquired in relation to the environment, even if the learner is young. According to geneticists, newborn babies will have “buds” of all languages. Which language a child acquires later depends on his environment.

2. Surround yourself with English.

It is the most effective way to learn a language. This is moving to a country where that language is spoken. However, not everyone has this opportunity. Therefore, the second but less effective method is to surround yourself with English. For example, to teach children the language: read them fairy tales and stories in the original version and sing them in English. Another way is to practice basic dialogues with your friends using new vocabulary. Of course, watch all videos: movies, series and cartoons in their original version with subtitles. Even set your phone to English. The more people in your life who speak a foreign language the faster you will begin to understand what the foreigners in the city center want from you.

3. Fitness

You can learn English while training sports. Listen to podcasts from your favorite English-speaking fitness bloggers and train with them. If you do not like fitness, you can dance online with your favorite bloggers. For example, Caleb Marshall has been dancing with his audience online for over six years. One good dance a day will not only put you in a good mood, but also fill your vocabulary with the necessary vocabulary.

4. Do not limit yourself.

Technology does not stop developing. For example, using Skype, you can communicate with speakers from other countries without leaving your home. 15 minutes a day to talk with English speaking people is enough to maintain and even improve your English level. For example, Skying’s Talks Service will help you find the person you are interested in within minutes. This format allows you to chat with an English-speaking person while waiting for a friend who is running late. The interviewer will not be just a stranger, but because he is a teacher at the end of conversation he will give some recommendations on how to learn English better.

5. Practical training.

This method will work if you want the child to remember that word. It is necessary to try to involve his sense organs eyes, sound organ, ear, muscle sensation, if possible, sense of smell and taste in the process of remembering. For example, when a student tastes an apple the teacher can tell whether its color red or green, whether it tastes sweet or sour, and what it smells like. He should demand that he give information about that fruit in English. It also helps the child in his further studies. When the teacher asks the students the English name of the colors, the child immediately remembers the time when he ate the fruit and answers. Therefore, the use of such methods ensures that the student retains the information in his memory for a long time.

Educational mobile applications.

Currently, there are countless such applications, but almost all of them focus on translating words and teaching grammar. Choose something that really interests you. There are also apps that will get you closer to your goals and just waste your time. If you want to learn new habits and make friends who speak English, sign up at “Coach.me”. If you want to develop your memory and learn to read faster, write better, process large volumes of information in English download Elevate. If you want to hear what is said twice and repeat it immediately in speech, the best program for you is English Central. If you already have a good level but want to improve it, download ABA English.

Conclusions and suggestions.

After our country gained independence, great attention has been paid to learning foreign languages in our country. In particular, the decision of the President of the Republic of Uzbekistan “On the further improvement of the system of learning foreign

languages” adopted on December 10,2012 and the continuous learning of foreign languages in the first grades of general education schools starting from the 2013-2014-academic year. The introduction of teaching is a proof of this. Nowadays, foreign language, especially English, is taught not only to school, lyceum, college students of higher educational institutions, but also to students of M.T.M. and employees working in various fields. There is a reason for this,of course. Learning the languages of economically scientifically and culturally developed countries is the main factor in acquiring the achievements of world science and development. Language learning also depends on age periods. According to psychologists, children learn language faster and easier than adults. The main reasons for this are the natural tendency of children to learn languages, the fact that they have a strong ability to imitate, and the fact that children have more time than adults. It should be noted that 6-7 year-old children do not understand the meaning of information, but memorize it mechanically. Therefore, it is necessary not to start teaching English to elementary school students with grammatical concepts. Otherwise, from the first step of learning a foreign language, it is possible to strain the child and extinguish his interest.
