Abstract. In today's advanced age, we cannot imagine the teaching process without books. especially e-books and highly written textbooks are very important to us. this article explains advantages of modern textbooks in teaching children.

Keywords. Modern textbooks, classroom instructors' ability, chronological presentation, national conferences.

The textbook is one of the most prevalent tools in the classroom; find out its benefits and drawbacks as well as how to include additional resources into your lessons. The value of this material will be especially great for new instructors. includes advice on how to complement the textbook with extra readings, use it as a guide for pupils, and more.

You'll undoubtedly see when you tour classes that the majority, if not all, of those classrooms employ a common textbook series. Numerous factors contribute to this, including the curriculum's structure and emphasis, the administration's demands, and the degree of classroom instructors' ability.

There are various benefits of using textbooks in the classroom:

1. Books are very beneficial for new instructors. Each lesson's structure and subject matter are meticulously laid out in detail.
2. Units of instruction are grouped in textbooks. You may learn all the strategies and lessons need to go through a subject in depth from a textbook.
3. You can get a well-rounded, chronological presentation of the content from a textbook series.
4. Textbooks include a comprehensive list of instructional steps that explain what to do and when to do it. There are no surprises because everything is well explained.
5. Textbooks offer a comprehensive curriculum to administrators and educators. The series often draws from the most recent research and instructional techniques.

The effectiveness of a textbook depends on the instructor who employs it. Additionally, it's crucial to keep in mind that a textbook is only one tool in your teaching toolbox, albeit a very crucial one. Teachers can depend too much on textbooks and fail to take into account additional resources or assistance for the classroom. Some teachers

disapprove of the usage of textbooks in the classroom because they are out-of-date or don't adequately cover a certain subject.

One of the choices you'll have to make as a teacher is how you want to use the textbook. Despite what they might seem like on the surface, textbooks do have certain drawbacks. The most prevalent flaws in textbooks are shown in the table below, along with solutions for those problems.

I like to think of textbooks as tools since their effectiveness depends on the user. A skilled carpenter may build a huge cathedral or a priceless piece of furniture with the simple use of a hammer. In the hands of another, the outcome can be a dilapidated shed or a shaky bench. There are several variables that will affect how you decide to use textbooks.

Do not make the error of basing your whole classroom curriculum on a single textbook, I would like to offer a personal point of caution here. The textbook should only be applied sparingly. A gorgeous oak chest is not built by a carpenter alone using a hammer. If necessary, she may use a plane, chisel, saw, sander, or.

Consider the following when deciding how you want to use textbooks:

- The textbook should not be the sole resource available to pupils.
- Use a textbook to help with education, not as a requirement.
- Feel free to edit, alter, delete, or supplement the textbook's content.
- Add a ton of extra readings to the textbook.

Educator reference books, participation at local, regional, or national conferences, articles in specialized journals, and interactions with veteran educators can all be used to supplement the textbook's material for instructors.

Conclusion

Standards, whether those from professional organizations, your state, or your school district, are another form of instructional resource for your classroom. They can guide you in developing appropriate lessons and assist you in helping your students achieve academically. However, just as with any other resource, they are teaching tools. Just as you would select one set of tools to build a log cabin, so, too, would you select another set of tools to build a condominium. The same is true of the teaching tools at your disposal.

One primary advantage of using textbooks is that they are written and designed by experts in the topics discussed. Textbook writers keep up-to-date with the research in a particular subject area, which means that teachers and students are presented with the most valuable information in that subject field. If teachers didn't have these experts to rely on, they could miss some of the important advances in a particular area. Textbook writers can be viewed as a teacher's and a student's most valuable aid.

Textbooks have many advantages for students. First among them is the ease at which they allow students to find information. Textbooks are usually written with

detailed contents pages and indexes that, if designed properly, can be used to quickly find what the student is looking for. Textbooks also provide structure for a student's learning. Each chapter should have a logical flow, building on the knowledge acquired in previous chapters. The material in each chapter is also usually presented in a similar design, which means the student knows exactly how to approach each topic as it is presented.
